Timer – one hour settings

Ozone Output – powerful 500 milligrams p/hr

Easy snap out filter

115V - Standard electrical plug

Manufactured in the USA

### OPERATING INSTRUCTIONS

1. Select a location which will allow the unit to discharge into the center of the room. It is advantageous to place the unit at a high position rather than near the floor, if possible.
2. Plug the unit into a grounded, 120 VAC, 3 prong electrical outlet.
3. With the power switch in the "OFF" position, adjust the "TIMER" control to the desired time.
4. Turn the power switch to the "ON" position. The unit will start producing ozone, as indicated by the amber "OZONE" light, until the desired time has elapsed. Ozone is only produced when the "OZONE" light is on. After the timer has elapsed, the "OZONE" light will go out. The fan will continue running, even though no ozone is being produced, until the power switch is moved to the "OFF" position.
5. The unit may be shut off at any time by moving the power switch to the "OFF" position.
